

Architectural concept report

Spatial programme, plans, elevations and sections

PROJECT	Uitbreiding moskee Haci Bayram
LOCATION	Bikkersweg 88, Bunschoten
ISSUE	2026-07-27
STATUS	CONCEPT - NOT FOR SUBMISSION OR EXECUTION

This report contains actual generated concept deliverables. It is not a professional certification and is not approved for permit submission or construction.

1. Design intent

The extension is arranged as a compact 7 x 10 m volume connected schematically to the existing mosque. A flat roof and simple facade rhythm support a clear and economical concept.

2. Ground floor

The ground floor contains a 43.40 m2 prayer hall and a 26.60 m2 service strip with entrance, stair, WC and ablution space.

Field 1	Field 2
Prayer hall	43.40 m2
Entrance	8.36 m2
Stair	6.84 m2
WC	5.32 m2
Ablution	6.08 m2

3. First floor

The first floor contains a 40.60 m2 women's prayer hall and supporting classroom, stair, canteen and sanitary/store spaces.

Field 1	Field 2
Prayer hall women	40.60 m2
Classroom	9.24 m2
Stair	7.56 m2
Canteen	6.30 m2
Sanitary/store	6.30 m2

4. External appearance

Generated elevations use light masonry, recessed frames and a parapet roof line. Final material selection and integration with the existing building remain design tasks.

5. Required verification

All geometry is a generated concept based on a 7 x 10 m two-storey extension and must be reconciled with a current survey and cadastral control.

Structural, geotechnical, fire-safety, ventilation, parking and AERIUS conclusions require validation and signature by the responsible professionals.
